Report on making of eco friendly Ganesh

Ganesh Chaturthi is all around the corner and to promote sustainability and save our environment Eco-friendly Ganpati Making Competition was organized by the Nature club BVRITH. The purpose of the event is to give a platform to the students in order to display and contextualize, and communicate ideas and thoughts through their art.

Such cultural activities foster bringing students together, understanding the importance of team and teamwork, sharing and caring, strengthening relationships, and celebrating different communities, religions, and festivities.

The event took place on 16th september 2023 was the time at 2.30pm to 4pm allotted to the students for designing and creating the idol where the students exhibited their artistic skills by using clay dough, various pulses, flour, and many jewellery items in their artwork.

Our judge of the event Dr. Roja Rani rewarded points to all the competing teams on the basis of creativity level applied, dimensions of the idol, designs of the statue parts, color scheme selection, decoration and time management of their models.

To spare and secure our nature, we should hold hands and do our bit, and go for eco-friendly items. This will help to save our water resources as well as it will protect human health.
