Name of the Activity: Webpage Development

Faculty Name: Ms Suparna Das

Class: III / I CSE

Academic Year: 2023-2024

Subject Name: Web Technologies

Topic: Web Page development using HTML, CSS and JavaScript.

No. of Participants: 68

Brief Write – Up:

As part of this practical activity, students were instructed to design and develop a complete set of interconnected web pages using **HTML, CSS, and JavaScript**. To guide and inspire them, sample screenshots of different webpage outputs were shared. Based on these, students were divided into small groups. Every group was required to recreate these sample pages and further enhance them by adding additional connecting pages using **hyperlinks** to ensure smooth navigation between all pages of the website. The activity emphasized both front-end development skills and creative design thinking. Students were also instructed to carefully document the source code for each individual webpage, explaining the purpose and function of the code segments. Upon completion, each group had to record a **video demonstration** showcasing the working of their website project and submit both the video and the complete set of documented code files for evaluation.

List of students and projects:

SI No	Roll no	Name	Project title
1	21wh1a0570	R.Ankitha	Gify website
	21wh1a0573	B.Charitha	
	21wh1a0576	B.Hemalatha	
	21wh1a0591	K.R.H.Angel	
	21wh1a05a0	V.Anitha	

2	21wh1a05a6	K.Sumana sri	event website
	21wh1a05b7	B.Sanvi sri	
	21wh1a05b8	D.PavaniKalyani	
	21wh1a05c5	Ch.Mallika	
	21wh1a05c6	K. Vyshnavi	
3	21wh1a0a5	K.Hema latha	To-do-list
	21wh1a0593	P. Rakshitha Reddy

Photos:

1. Event Webpage

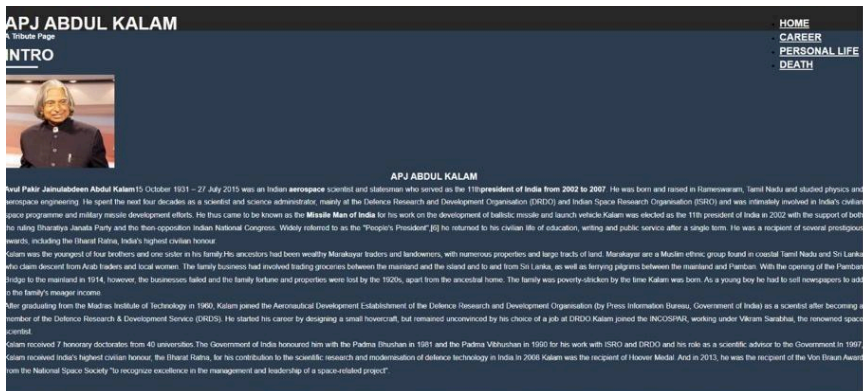

2. Form page

An application form titled "Application Form" is displayed on a blue background with various icons. The form includes fields for Name, Email, Gender (with a dropdown menu), and Message. A green "Submit" button is at the bottom.

3. Tribute page

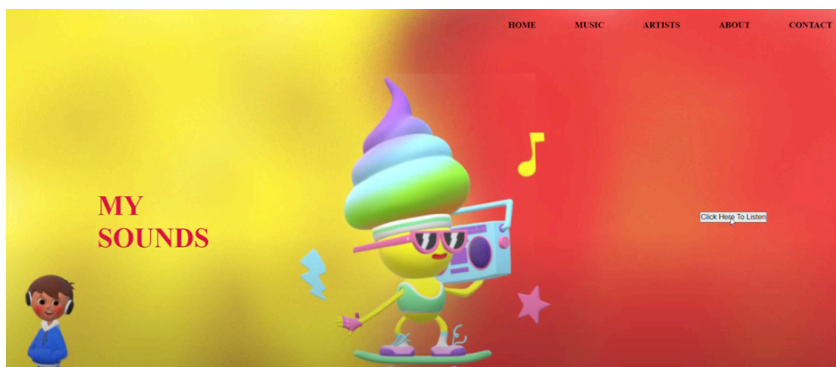

A tribute page for APJ Abdul Kalam. The page features a header with "APJ ABDUL KALAM" and a navigation menu with links: HOME, CAREER, PERSONAL LIFE, and DEATH. Below the header is a portrait of Kalam and a detailed biography. The biography mentions his birth on October 15, 1931, and his death on July 27, 2015. It highlights his role as the 11th President of India from 2002 to 2007, his work on the development of ballistic missile and launch vehicle, and his receipt of the Bharat Ratna, India's highest civilian honour.

4. About page

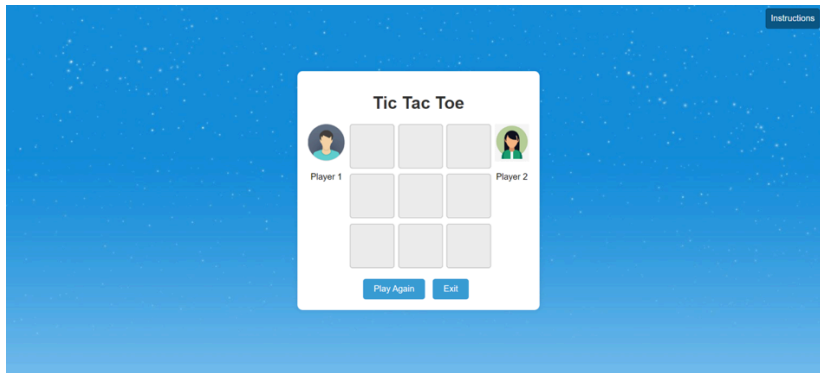

An "About" page for Sachin Ramesh Tendulkar. The page features a header with "Sachin Biography" and a navigation menu with links: About Life, Stats, Personal Life, and Captancy. Below the header is a "Sachin Gallery" section with a grid of images. The main content area is titled "About Sachin" and provides a detailed biography of Sachin, mentioning his birth on April 24, 1973, and his role as a former international cricketer and captain of the Indian National team. The page also includes a search bar with the text "Hai".

5. Music Webpage

A music webpage with a red and yellow gradient background. The page features a navigation menu with links: HOME, MUSIC, ARTISTS, ABOUT, and CONTACT. The main content area is titled "MY SOUNDS" and features a cartoon character of a person with a large, colorful, multi-colored head (purple, green, yellow, and red) wearing sunglasses and holding a boombox. The character is standing on a skateboard. A small "Click Here To Listen" button is visible in the bottom right corner.

6. Tic-tac-toe game webpage

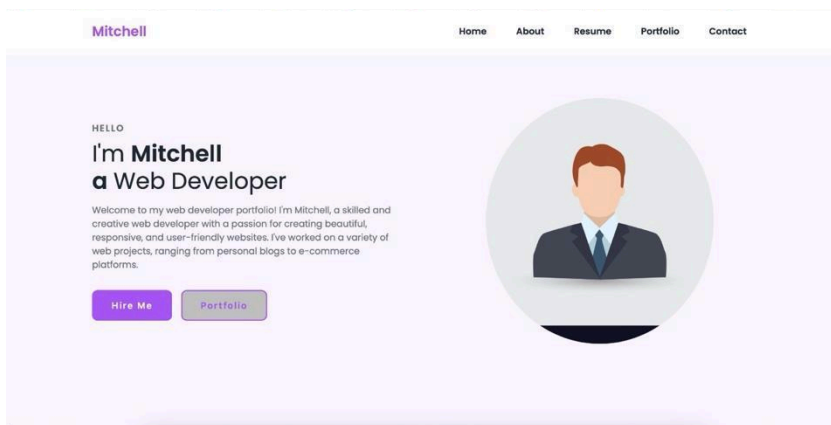

7. Event planning webpage

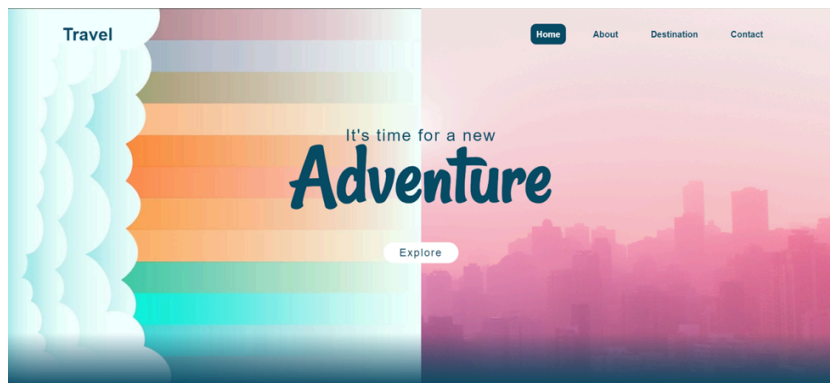

8. Photography webpage

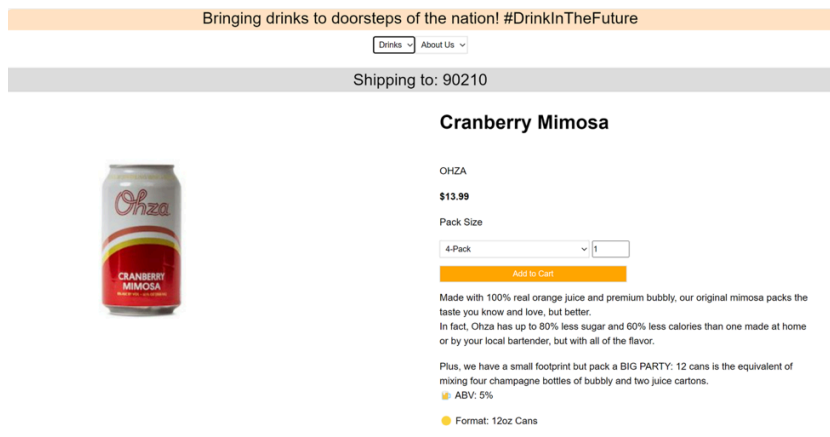

9. Portfolio webpage

10. Parallax webpage

11. Product Landing webpage

Name of the Activity: Mind Maps

Faculty Name: Ms. D Swapna

Class / Semester: III/II CSE

Academic Year: 2023-2024

Subject Name: Compiler Design

Topic: Syntax Analysis, Semantic Analysis, Lexical Analysis, Code Optimization Intermediate Code Generation and Code Generation.

No. of Students Participated: 50

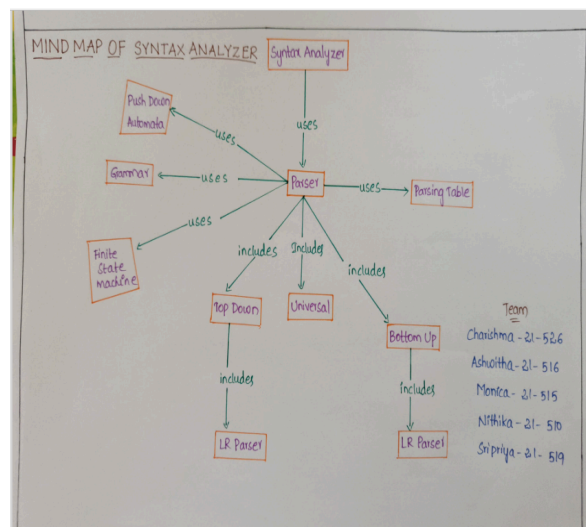

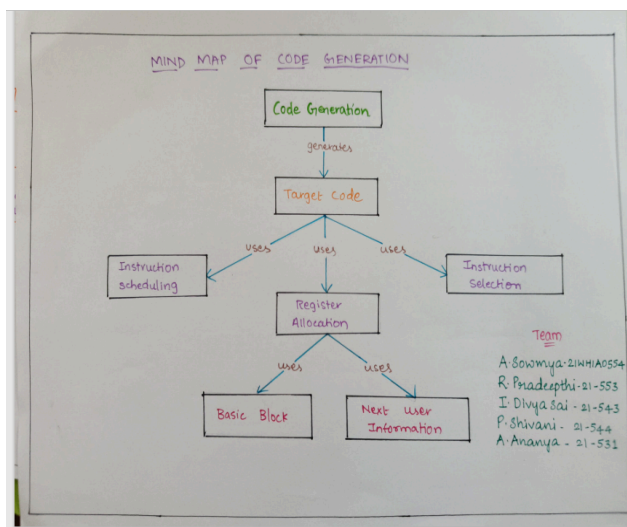

Brief Write-up :

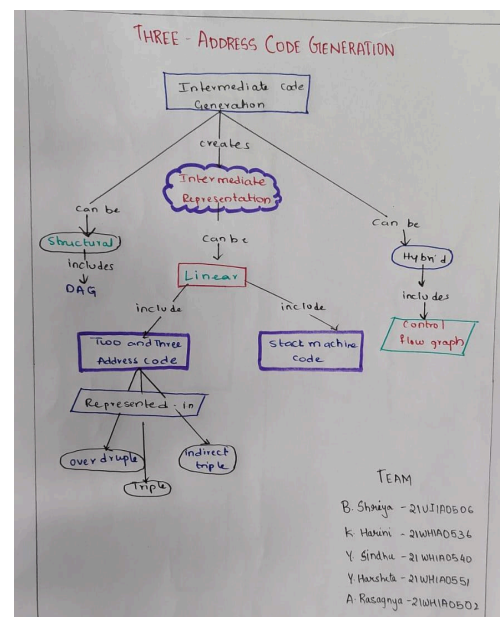

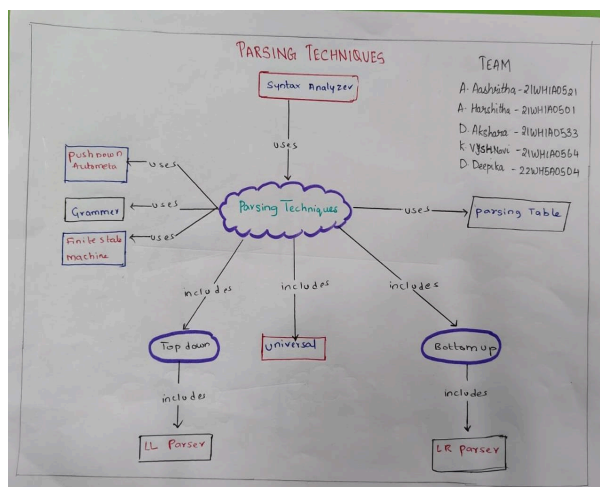

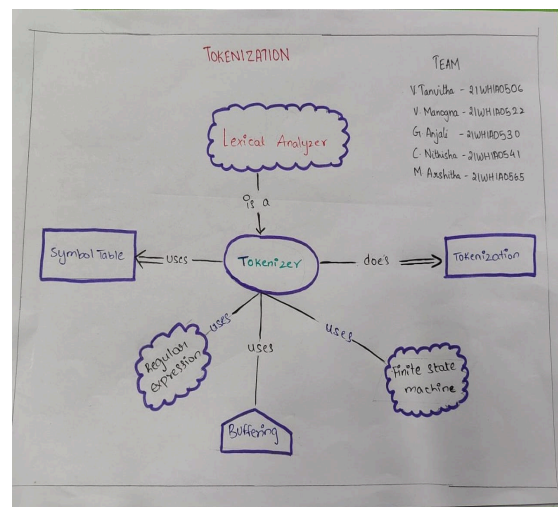

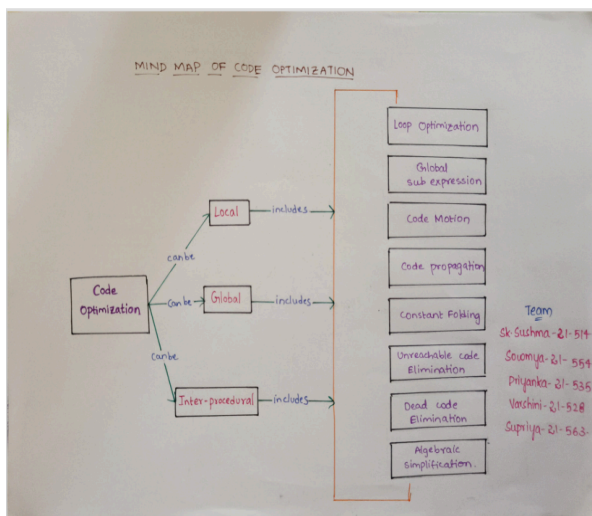

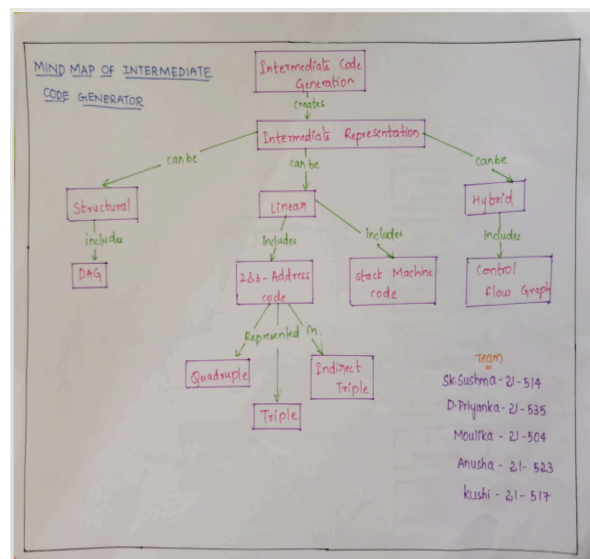

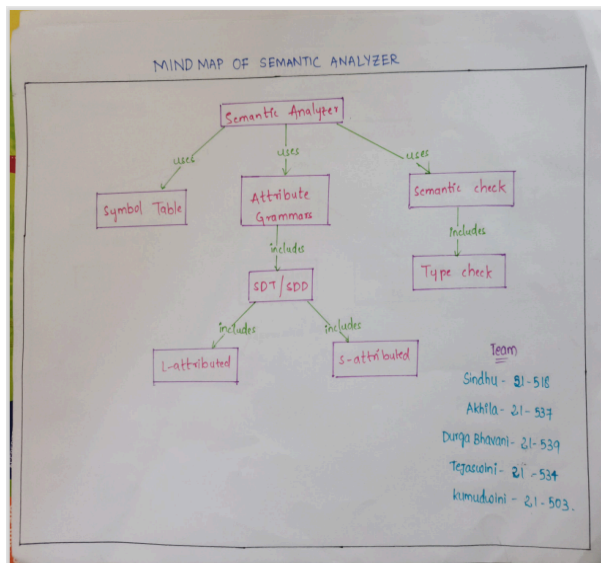

As part of an engaging and collaborative classroom activity, students were asked to form teams consisting of 5 members. Each team was assigned one of the core topics from the Compiler Design curriculum, such as Lexical Analysis, Syntax Analysis, Semantic Analysis, Intermediate Code Generation, Code Optimization.

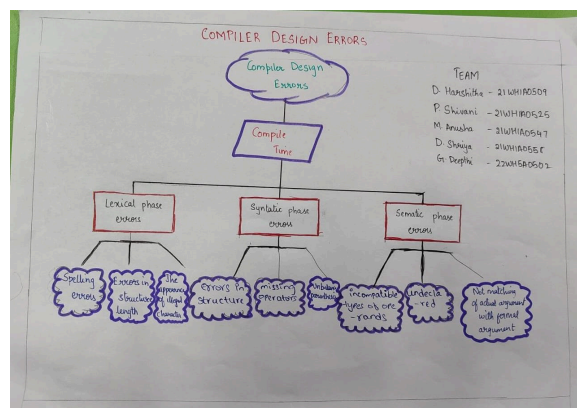

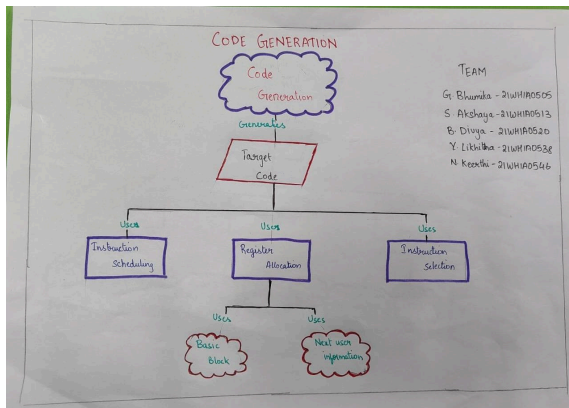

The objective of the activity was to help students gain a clear and interconnected understanding of compiler phases through the creation of mind maps. A mind map is a visual learning tool used to organize and represent information hierarchically. It starts with a central concept placed at the center of a blank page and expands outward with branches representing related ideas, terms, definitions, processes, and diagrams.

Using this approach, each team brainstormed and visually structured their assigned topic to highlight the key concepts, flow of operations, relationships between sub-processes, and interactions with other compiler stages. Teams used creative visuals, colors, and layout techniques to make their mind maps intuitive and memorable. This activity not only enhanced their conceptual clarity but also improved teamwork, communication, and presentation skills. The mind mapping method proved highly effective in helping students retain, recall, and relate complex compiler concepts, thereby reinforcing learning through visualization and peer interaction.

Name of the Activity: Problem Solving

Faculty Name: Ms. D Swapna

Class / Semester: III/I CSE

Academic Year: 2023-2024

Subject Name: Compiler Design

Topic: LR(0) Parser, SLR(1) Parser , CLR(1) Parser and LALR(1) Parser.

No. of Participants: 60

Brief Write-up :

The Problem Solving Activity was designed to assess and enhance students' ability to solve complex problems efficiently, think critically, and understand advanced parsing techniques in Compiler Design. This activity aimed to foster analytical thinking, encourage teamwork, and improve conceptual clarity through collaborative engagement.

Students were instructed to form teams of 2 members, and each team was assigned problems selected from the Unit-2 syllabus of Compiler Design. These problems were curated from previous University External Examination papers, focusing specifically on LR(0), SLR(1), CLR(1), and LALR(1) Parsers.

The objective was not just to arrive at answers but to:

- Understand and identify the root causes of errors in parsing
- Construct parsing tables
- Analyze conflicts (like shift-reduce or reduce-reduce)
- Clearly distinguish among the different types of LR parsers

Within the classroom environment, students worked collaboratively to solve the assigned problems and then selected one representative to present their solution on the board. During the presentation, they explained the step-by-step process, discussed logic behind each parser state, and clarified how the chosen parsing technique efficiently resolves grammar analysis issues.

This activity provided students with:

- Hands-on practice with formal grammar handling
- Real-time exposure to applying theoretical parsing techniques
- A platform to identify problem patterns and design systematic solutions
- Improved confidence in tackling exam-level questions

By engaging in this structured problem-solving approach, students developed the ability to think critically, apply their knowledge in practical scenarios, and better understand the mechanics of parser construction and conflict resolution in compiler design.

Name of the Activity: Chart preparation

Faculty Name: Ms. S.Vidyullatha

Class: III/I CSE

Academic Year: 2023-24

Subject Name: Web Technologies

Topic: HTML Syntaxes and CSS tags

No. of Participants: 66

Brief Write – Up:

As part of a hands-on and collaborative learning activity, students were divided into 9 groups, with 5-6 members per group, and were assigned the task of preparing informative and creative paper charts based on the core topics of HTML and CSS tags under the subject of Web Technologies.

Each group was required to visually present fundamental concepts including:

- HTML tags and attributes
- The structure of an HTML document
- Types of CSS (inline, internal, and external)
- CSS selectors and properties
- The distinction between HTML for content and CSS for styling

The primary objective of the activity was to foster collaborative learning, visual thinking, and concept reinforcement. By translating theoretical knowledge into visual content, students gained a clearer understanding of how HTML and CSS work together to build web pages. To make the charts interactive and engaging, teams were encouraged to incorporate diagrams, syntax examples, flowcharts, and creative elements that simplify technical content.

This activity effectively combined technical knowledge with creativity, enhanced students' communication skills, and created a visually rich learning environment to support their journey in front-end web development.

Group	Roll Nos
Team-1	21WH1A05F4, 21WH1A05J3, 21WH1A05E1, 21WH1A05D2, 21WH1A05E4, 21WH1A05F3

HTML

ROW SPAN

Description: To make a cell span more than one row, use the rowspan attribute.

Sample Program:

```
<table>
  <tr>
    <td colspan="2">Name </td>
  </tr>
  <tr>
    <td colspan="2">Age </td>
  </tr>
  <tr>
    <td colspan="2">Address </td>
  </tr>
  <tr>
    <td colspan="2">City </td>
  </tr>
  <tr>
    <td colspan="2">State </td>
  </tr>
  <tr>
    <td colspan="2">Country </td>
  </tr>
  <tr>
    <td colspan="2">Output: </td>
  </tr>
</table>
```

Name	
Age	
Address	
City	
State	
Country	
Output:	

CELL PADDING

Description: We can specify different padding for all sides of the cell content.

Sample Program:

```
<table>
  <tr>
    <td colspan="2">padding-top: 10px;
    <td colspan="2">padding-bottom: 10px;
    <td colspan="2">padding-left: 10px;
    <td colspan="2">padding-right: 10px;
  </tr>
  <tr>
    <td colspan="2">Name </td>
    <td colspan="2">Age </td>
  </tr>
  <tr>
    <td colspan="2">Address </td>
    <td colspan="2">City </td>
  </tr>
  <tr>
    <td colspan="2">State </td>
    <td colspan="2">Country </td>
  </tr>
  <tr>
    <td colspan="2">Output: </td>
  </tr>
</table>
```

Name		Age	
Address		City	
State		Country	
Output:			

TABLE

Description: HTML tables allow web developers to arrange data into rows and columns.

Sample Program:

```
<table>
  <tr>
    <td colspan="2">Name </td>
  </tr>
  <tr>
    <td colspan="2">Age </td>
  </tr>
  <tr>
    <td colspan="2">Address </td>
  </tr>
  <tr>
    <td colspan="2">City </td>
  </tr>
  <tr>
    <td colspan="2">State </td>
  </tr>
  <tr>
    <td colspan="2">Country </td>
  </tr>
  <tr>
    <td colspan="2">Output: </td>
  </tr>
</table>
```

Name	
Age	
Address	
City	
State	
Country	
Output:	

CELL SPACING

Description: Change the space between the cells in the table using cellpadding property.

Sample Program:

```
<table cellpadding="10">
  <tr>
    <td colspan="2">Name </td>
  </tr>
  <tr>
    <td colspan="2">Age </td>
  </tr>
  <tr>
    <td colspan="2">Address </td>
  </tr>
  <tr>
    <td colspan="2">City </td>
  </tr>
  <tr>
    <td colspan="2">State </td>
  </tr>
  <tr>
    <td colspan="2">Country </td>
  </tr>
  <tr>
    <td colspan="2">Output: </td>
  </tr>
</table>
```

Name	
Age	
Address	
City	
State	
Country	
Output:	

COL SPAN

Description: To make a cell span more than one column, use the colspan attribute.

Sample Program:

```
<table>
  <tr>
    <td colspan="2">Name </td>
  </tr>
  <tr>
    <td colspan="2">Age </td>
  </tr>
  <tr>
    <td colspan="2">Address </td>
  </tr>
  <tr>
    <td colspan="2">City </td>
  </tr>
  <tr>
    <td colspan="2">State </td>
  </tr>
  <tr>
    <td colspan="2">Country </td>
  </tr>
  <tr>
    <td colspan="2">Output: </td>
  </tr>
</table>
```

HTML BASIC TAGS

BOLD TAG

DESCRIPTION: displays the text in BOLD FORMAT

SYNTAX:

EXAMPLE:

```
<html>
<body>
<div> The b element
</div>
</body>
</html>
```

OUTPUT:

The b element

This Normal Text - bold text

ITALIC TAG

DESCRIPTION: This tag makes a part of the text italic.

SYNTAX: <i> </i>

EXAMPLE:

```
<html>
<body>
<div> This is italic
</div>
</body>
</html>
```

OUTPUT:

This is *italic*

BREAK TAG

DESCRIPTION: This tag breaks a line at the end of the tag.

SYNTAX:

EXAMPLE:

```
<html>
<body>
<div> line 1
</div>
</body>
</html>
```

OUTPUT:

line 1

UNDERLINE TAG

DESCRIPTION: This tag underlines a part of the whole text.

SYNTAX: <u> </u>

EXAMPLE:

```
<html>
<body>
<div> This is a
</div>
</body>
</html>
```

OUTPUT:

This is a misplaced text.

STRIKE THROUGH TAG

DESCRIPTION: This removes text with a strike through of a line through it.

SYNTAX:

EXAMPLE:

```
<html>
<body>
<div> Paragraph
</div>
</body>
</html>
```

OUTPUT:

Paragraph

DELETE TAG

DESCRIPTION: It defines the deleted text with a strike.

SYNTAX:

EXAMPLE:

```
<html>
<body>
<div> This is a
</div>
</body>
</html>
```

OUTPUT:

This is a ~~misplaced~~ text.

PARAGRAPH TAG

DESCRIPTION: This defines paragraph and adds a line before it.

SYNTAX: <p> </p>

EXAMPLE:

```
<html>
<body>
<div> This is a paragraph
</div>
</body>
</html>
```

OUTPUT:

This is a paragraph

PREDEFINED TAG

DESCRIPTION: Defined the predefined tag.

SYNTAX: <code> </code>

EXAMPLE:

```
<html>
<body>
<div> This is a
</div>
</body>
</html>
```

OUTPUT:

This is a `misplaced` text.

HORIZONTAL RULE

DESCRIPTION: It is horizontal line used to separate content.

SYNTAX: <hr>

EXAMPLE:

```
<html>
<body>
<div> This is a
</div>
</body>
</html>
```

OUTPUT:

This is a

misplaced text.

Cascading Style Sheet (CSS):

cascading style sheet is a style sheet language used for describing the presentation of a document written in a markup language such as HTML or XML.

Example:

```
p {
  colour: red;
  text-align: center;
}
```

Style tag:

Syntax: `<style> </style>`

The `<style>` tag is used to define style information (CSS) for a document in HTML.

• **Selector in CSS:**

It is first part of CSS.

• **Declaration in CSS:**

Declaration includes a CSS property name and a value, separated by colon.

Ex: `h1 { color: blue; }`
 selector declaration

Types of CSS:

• **Inline** - By using the style attribute inside HTML elements.

Ex: `<h1 style="color: blue;"> Blue </h1>`
`<p style="color: red;"> Red </p>`

1.

Inline CSS

2.

External CSS

3.

Internal CSS

i. Embedded CSS

ii. Internal CSS

• **Internal** - by using a `<style>` element in `<head>` section

Ex: `<head>`
`<style>`
`body { background-color: powderblue; }`
`h1 { color: blue; }`
`p { color: red; }`
`</style>`
`</head>`
`<body>`
`<h1> heading </h1>`
`<p> para </p>`
`</body>`

• **Embedded CSS**

declarations allows dynamic styles, it should be downloaded at every page request as internal CSS can't be cached.

Ex: `<head>`

Name of the Activity: Moodle Quiz

Faculty Name: Dr. R. Suneetha Rani

Class: IV/ I CSE

Academic Year: 2023-2024

Subject Name: Data Mining

Topic: Introduction to Data Mining & Classification

No. of Participants: 54

Brief Writeup:

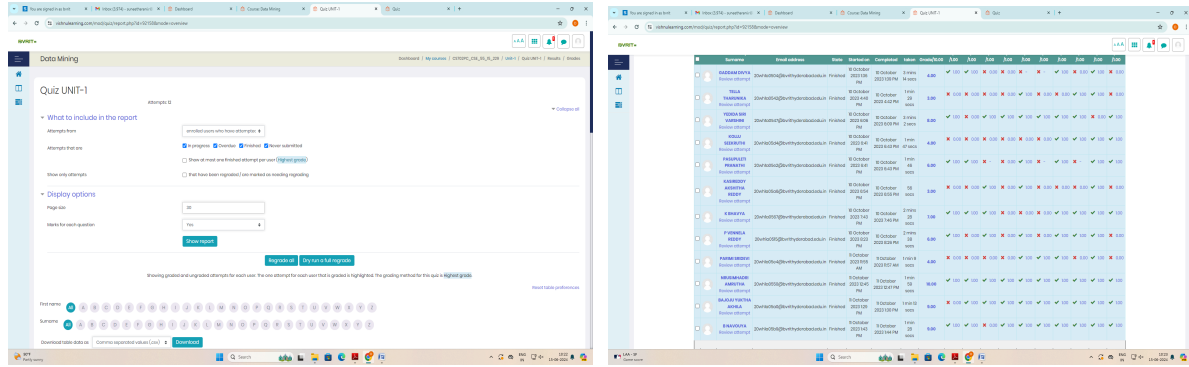

To assess students' understanding of fundamental concepts, a *Moodle Quiz* was conducted under the subject *Data Mining*, covering the topics *Introduction to Data Mining* and *Classification*. The quiz was designed to evaluate both theoretical knowledge and practical insights gained by students in these core areas.

The activity was carried out using the *Moodle* Learning Management System, providing a structured and user-friendly platform for digital assessment. The quiz included multiple-choice, true/false questions that tested students on key concepts such as data mining goals, techniques, classification models, supervised learning, and real-world applications.

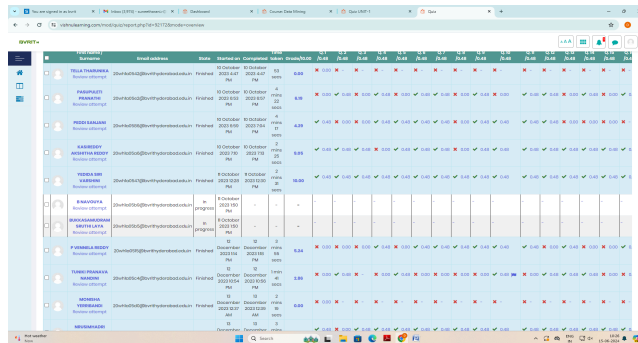

Students were given a limited time to complete the quiz, promoting quick thinking and conceptual clarity. The automated grading system of Moodle ensured immediate feedback, helping students identify their strengths and areas for improvement. Performance analytics generated from the platform also enabled instructors to track overall class performance and adjust teaching strategies accordingly.

All students actively participated and demonstrated a good level of preparedness. The quiz not only reinforced learning outcomes but also encouraged self-assessment and time management. Overall, the activity served as an effective tool to enhance engagement and deepen the students' understanding of fundamental data mining and classification concepts.

Department of Computer Science and Engineering

Name of the Activity: Open Classroom Brainstorming

Faculty Name: Dr. G. Naga Satish

Class: III / I CSE

Academic Year: 2023-2024

Subject Name: Data Analytics

Topic: Understanding the Data and Processing the Data

No. of Students Participated: 72

Brief Write – Up:

An open classroom brainstorming session was conducted under the topic "*Understanding the Data and Processing the Data*" as part of the Data Analytics course. The main objective of this activity was to encourage collaborative thinking and discussion among students on how to approach real-world datasets, identify relevant features, and apply appropriate preprocessing techniques.

Students were divided into small groups and presented with different types of datasets. Each group was asked to analyze their dataset by identifying data types, missing values, inconsistencies, and potential outliers. They brainstormed ways to clean and process the data, including normalization, encoding categorical variables, handling null values, and transforming data into a suitable format for analysis.

The open classroom setup fostered an environment where ideas could be freely shared and debated. Faculty facilitated the discussion by guiding students with prompts and real-time feedback, encouraging them to think critically about the steps involved in preparing data for analytics.

This activity helped students develop a deeper understanding of the significance of clean and well-structured data in deriving meaningful insights. It also enhanced their teamwork, analytical thinking, and problem-solving skills—key competencies in the field of data analytics.

Name of the Activity: Topic based Learning

Faculty Name: Ms. S.Vidyullatha

Class: III/I CSE

Academic Year: 2023-24

Subject Name: Information Retrieval System

Topic: Real-time scenarios in IRS

No. of Participants: 43

Brief Write – Up

The Topic-Based Learning activity was designed to bridge the gap between theoretical concepts and their real-time applications in Information Retrieval Systems (IRS). The primary objective of this activity was to help students develop a strong foundational understanding of how information retrieval works in practical scenarios such as search engines, recommendation systems, and data filtering.

Students were introduced to essential IRS concepts including documents, queries, indexing, precision, recall, F-measure, relevance scoring, and ranking algorithms. Special emphasis was placed on evaluating the effectiveness and performance of retrieval systems using industry-standard evaluation metrics. This allowed students to critically analyze how relevant and efficient search results are, and how to improve them.

The activity included real-time examples and case-based discussions, encouraging students to apply IR concepts to solve practical problems in the fields of data mining, machine learning, and

intelligent information systems. Students engaged in hands-on tasks such as designing basic retrieval models, simulating query-document matching, and computing evaluation metrics.

Name of the Activity: Widgets Creation

Faculty Name: Ms. Suparna Das

Class: III – II / CSE

Academic Year: 2023-2024

Subject Name: Scripting Language

Topic: Creation of Widgets using TCL/TK

No. of Participants: 70

Brief Write – Up:

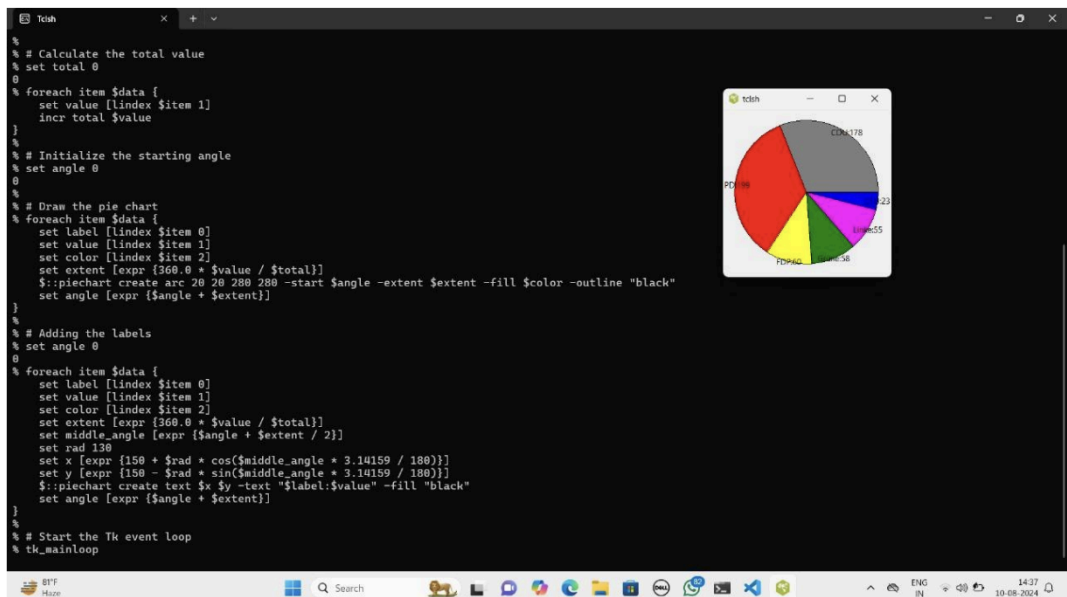

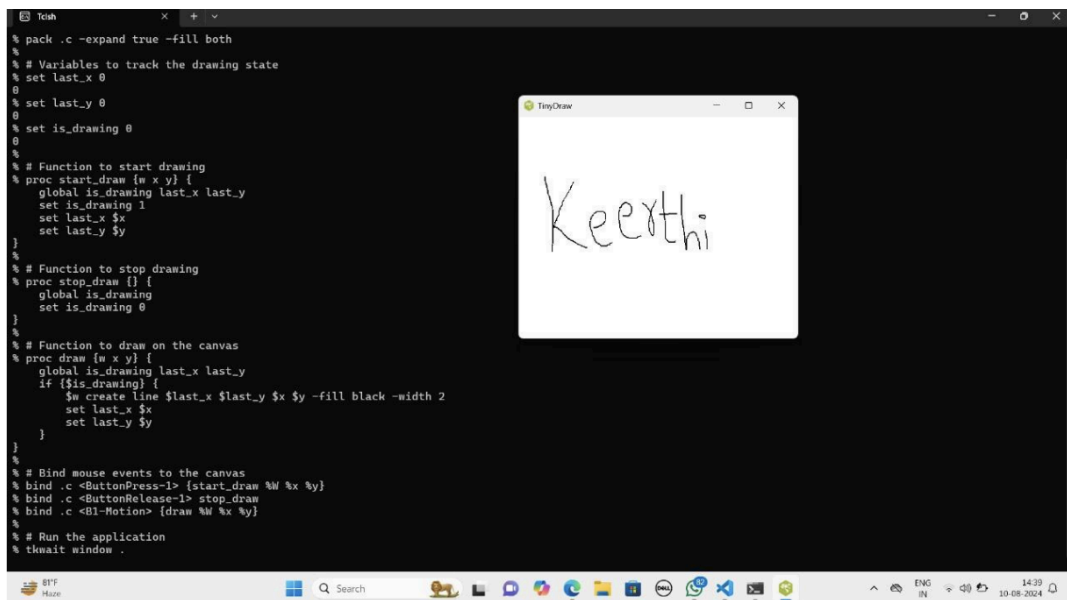

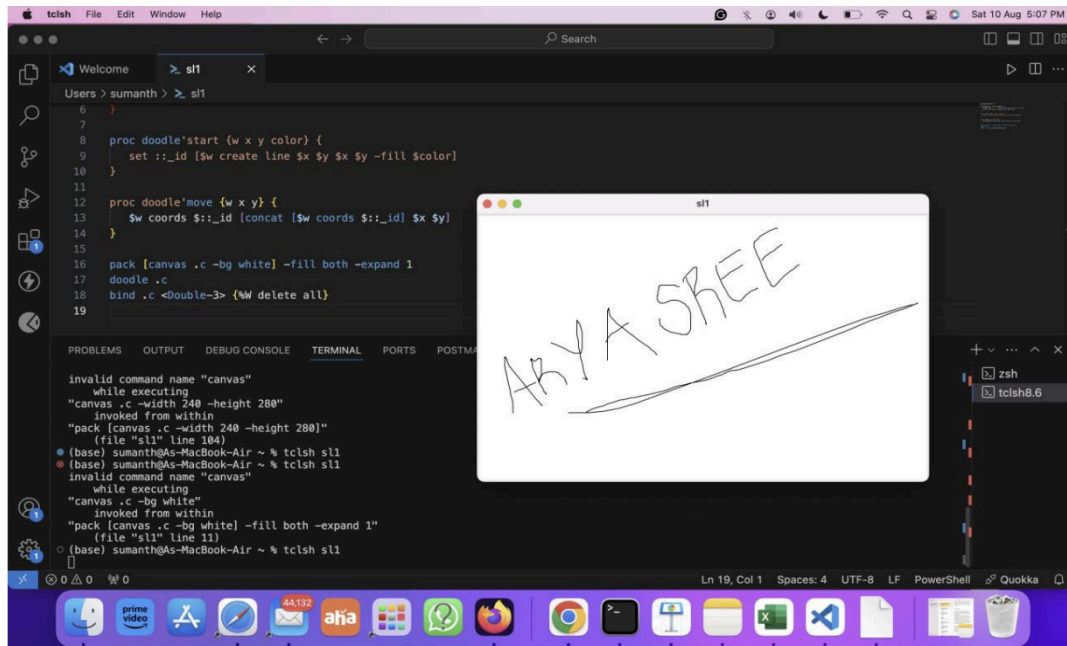

As part of the *Scripting Language* subject, a practical activity titled *Widgets Creation* was conducted to help students gain hands-on experience in GUI development using the *TCL/TK* scripting language. The focus of the activity was on designing and implementing various widgets and canvases that form the foundation of user interface creation.

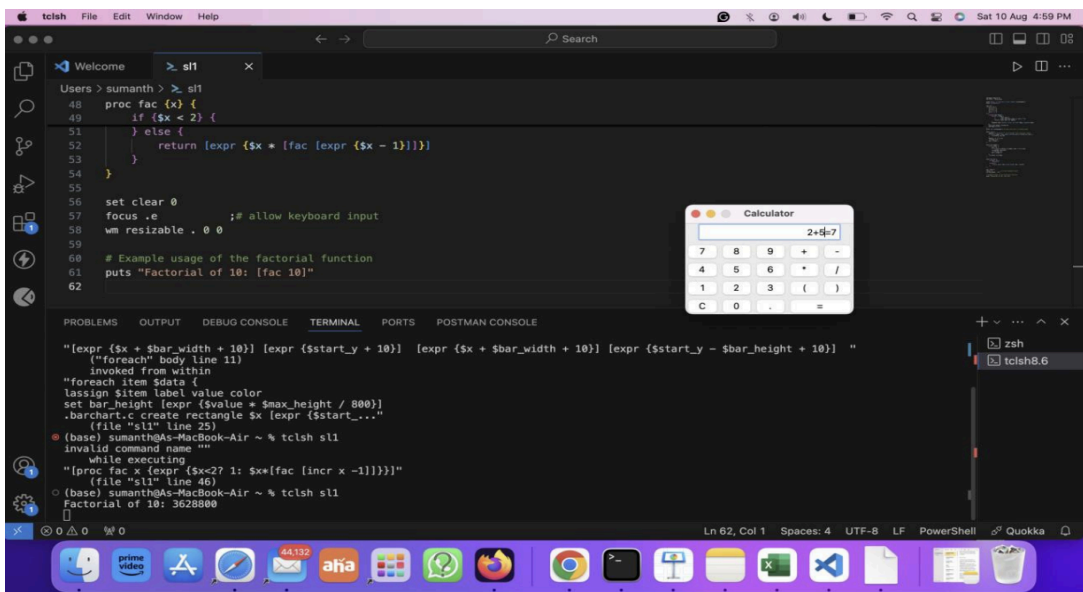

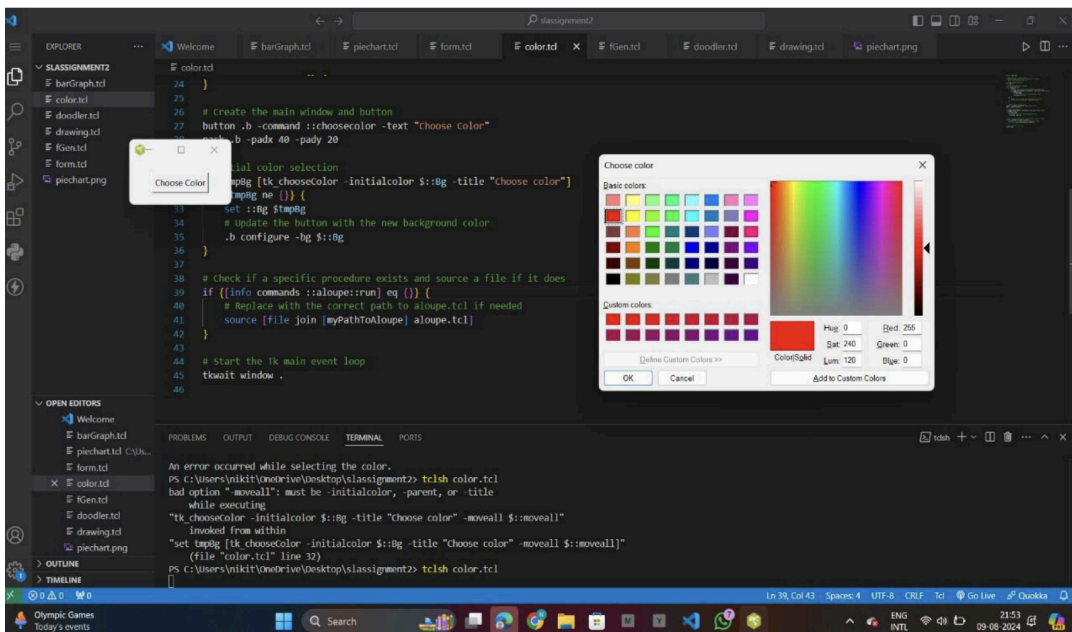

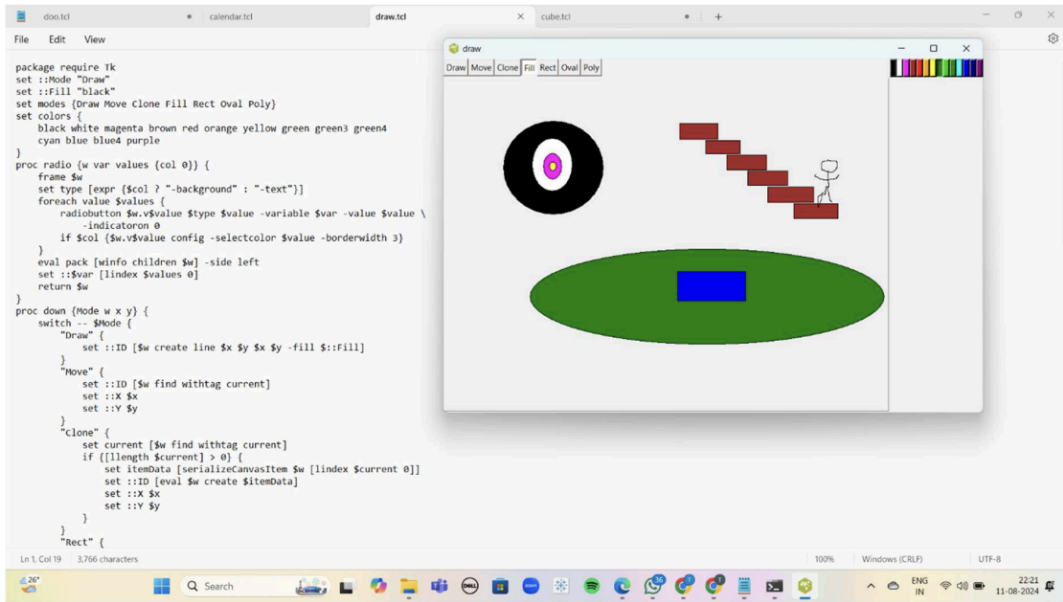

Students were provided with screenshots of 10 different widget-based outputs, which included buttons, labels, entry boxes, radio buttons, checkboxes, canvas-based drawings, and other UI elements. Using the *TCL/TK* application, students were asked to replicate each interface by writing corresponding code scripts.

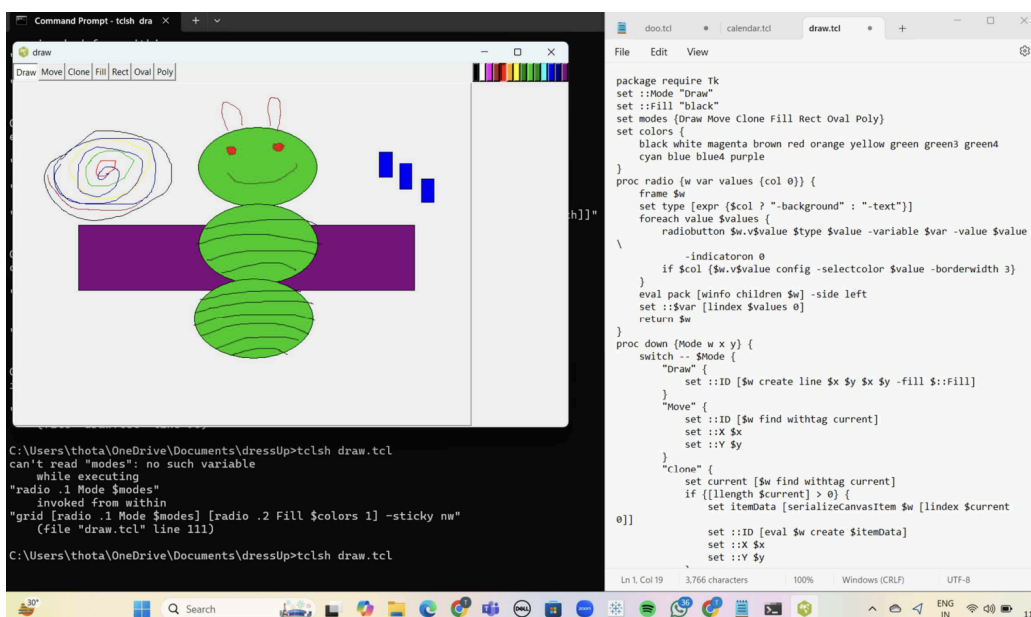

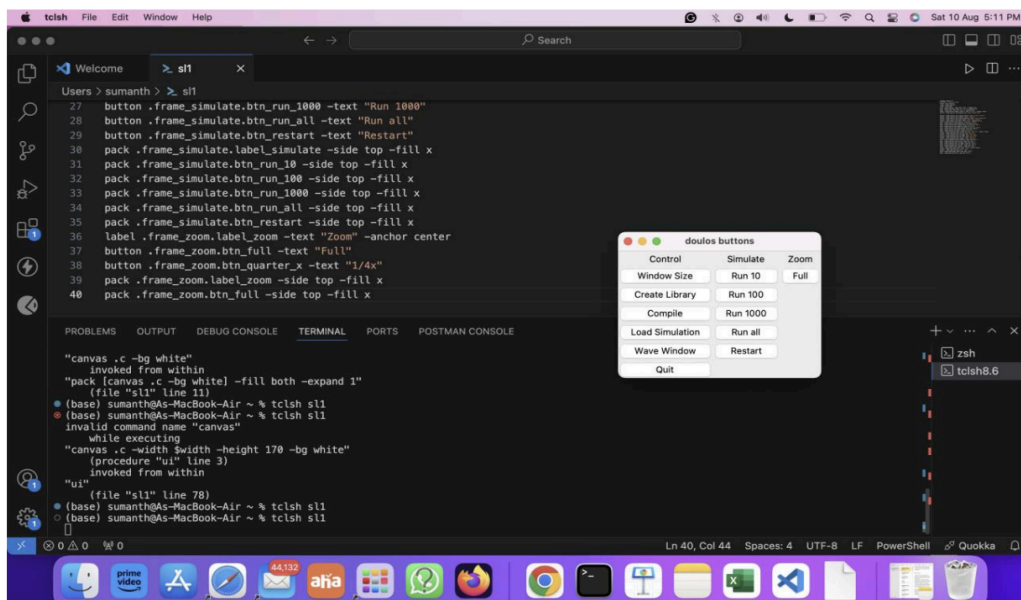

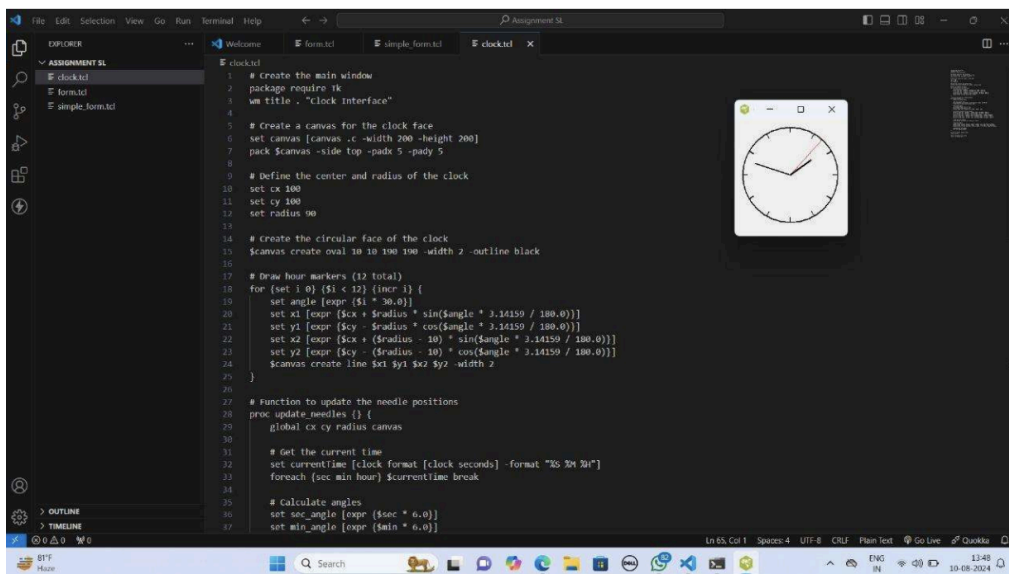

They were instructed to take full-screen screenshots of each successfully executed widget on their systems and document their code along with the screenshots in a single Word document for submission. This task encouraged attention to detail, accuracy in scripting, and a strong understanding of widget properties and layout management in *TCL/TK*.

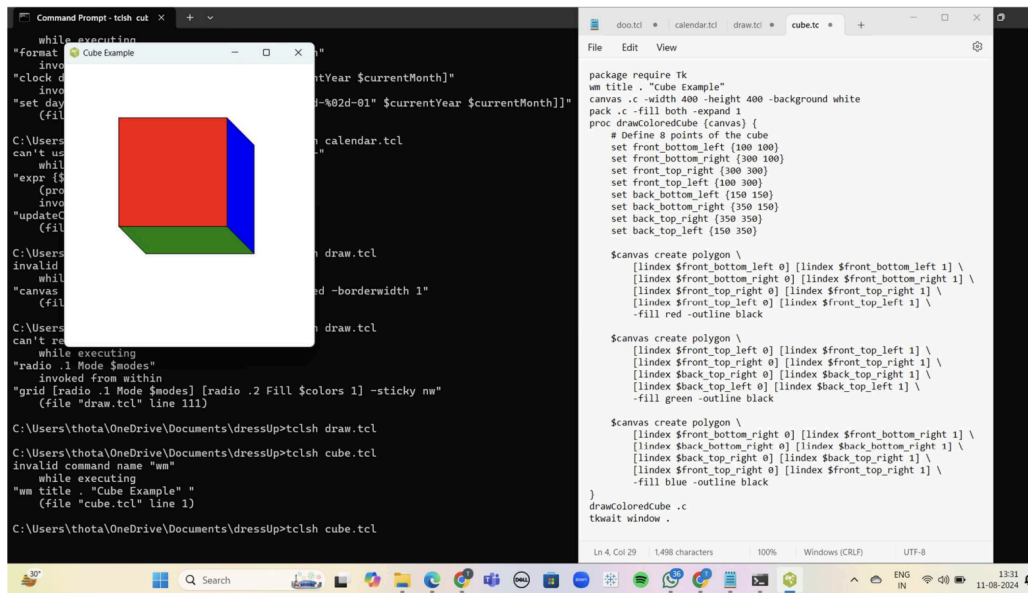

The activity provided an excellent opportunity for students to apply their theoretical knowledge into practice. It helped enhance their programming skills, logical thinking, and familiarity with GUI scripting. All students actively participated and successfully completed the task, making the session both productive and technically enriching.

Bachupally, Hyderabad-090

Department of Computer Science and Engineering

Name of the Activity: Cloud based website building

Faculty Name: Ms. Suparna Das

Class: IV / I CSE

Academic Year: 2023-2024

Subject Name: Cloud Computing

Topic: Accessing Cloud storage through web application

No. of Participants: 63

Brief Write – Up:

As part of the Cloud Computing curriculum, a group activity titled “Cloud-Based Website Building” was conducted to help students understand real-time implementation of cloud storage using web applications. Students were divided into teams of 3 members and tasked with developing a simple yet functional website hosted on a cloud platform such as Google Cloud. The websites were required to include features that interact with cloud storage services—such as file upload/download, data retrieval, and basic CRUD (Create, Read, Update, Delete) operations through cloud-hosted databases.

This hands-on activity aimed to bridge theoretical concepts with practical skills. Through this, they learned about authentication, data access permissions, cloud architecture, and deployment practices.

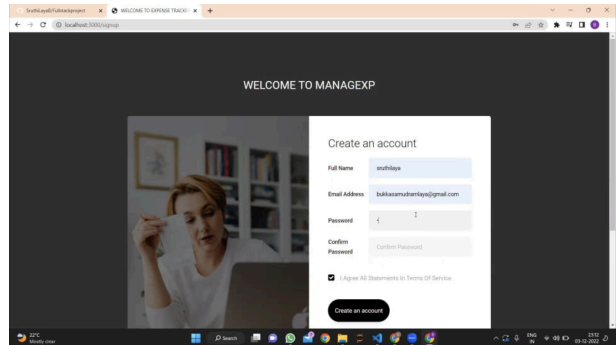

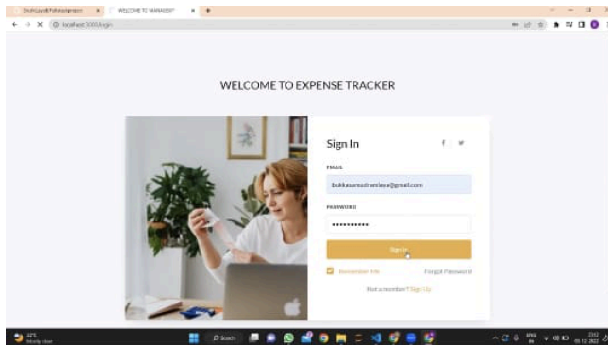

The activity encouraged collaborative learning, enhanced technical proficiency, and gave students a foundational understanding of how cloud storage powers modern web applications. It also reinforced core cloud concepts such as scalability, availability, and cost-efficiency in cloud-based environments. This experiential learning approach significantly enriched their understanding of the Cloud Computing course.

Academic Year: 2023-2024

Subject Name: Database Management Systems

Topic: SQL

No. of Participants: 70 (Few completed SQL(Basic) and SQL(Intermediate))

Brief Write-up:

As part of the **Database Management Systems (DBMS)** course, first an interactive discussion session is conducted to emphasize the importance of learning Structured Query Language (SQL) and its practical relevance in the field of data management and analysis. I explained how SQL serves as the backbone of most modern database systems and how proficiency in SQL enables students to efficiently manage, manipulate, and retrieve data from relational databases in real-world scenarios. The session also highlights the growing demand for SQL skills in various industries such as software development, data analysis, and business intelligence. To reinforce this learning, students are encouraged and instructed to enroll in and complete an **SQL Certification Course** offered by **Great Learning**, a reputed online learning platform within one hour with a quiz at the end of course for more in depth learning. This certification will not only validate their knowledge but also add value to their resumes, enhancing their employability. Students are expected to complete the course within the given timeframe and submit proof of certification.

Name of the Activity: Multimedia based delivery (Simulation and presentation)

Faculty Name: Ms. Padmavati E Gundgurti

Class / Semester: II/I- CSE

Academic Year: 2023-2024

Subject Name: Computer Organization and Architecture

Topic: Computer Organization Simulation

No of Participants: 67

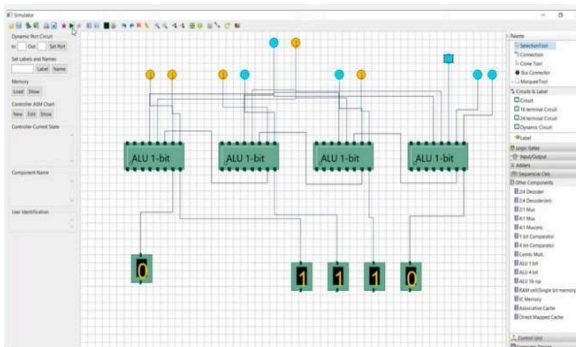

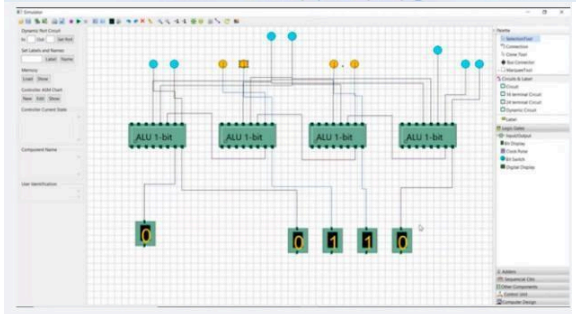

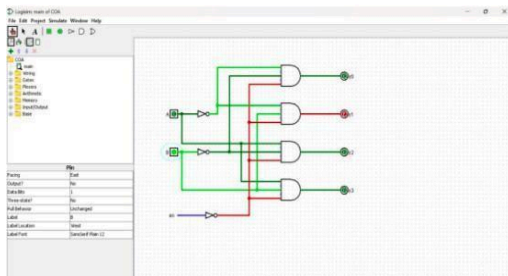

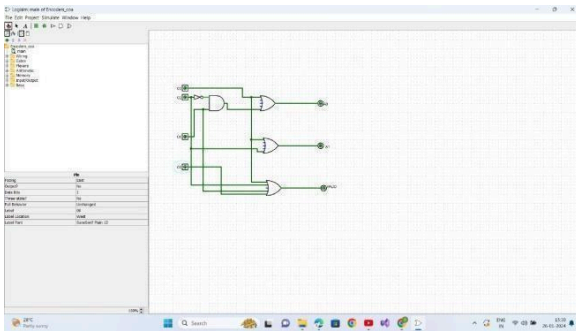

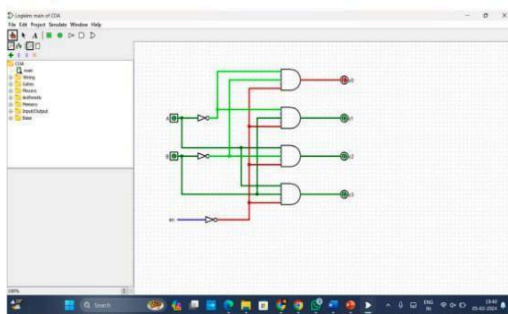

Brief Writeup:

As part of the Computer Organization and Architecture course, a multimedia-based learning activity was conducted using the Logisim tool to simulate key components of computer organization. The session was designed to help students gain hands-on experience in building and understanding the inner workings of digital circuits, such as adders, multiplexers, decoders, registers, and simple processors.

Through this activity, students were introduced to the Logisim simulation environment where they created logic circuits to visualize data flow and signal processing. The multimedia-based approach included instructional videos, live demonstrations, and guided tutorials that explained how to design and connect various components. Students worked individually and in small groups to build their own circuit simulations, followed by testing and debugging their designs.

This method of delivery allowed learners to move beyond textbook diagrams and experience circuit behavior in real-time. The visual and interactive nature of Logisim made complex concepts easier to grasp, reinforcing theoretical knowledge with practical application. The activity promoted curiosity, creativity, and collaborative problem-solving among students. Overall, it enhanced their understanding of computer organization by making learning more engaging, visual, and application-oriented.

Name of the Activity: Role Play

Faculty Name: Ms. KBKS Durga

Class: II / II CSE

Academic Year: 2023-2024

Subject Name: Operating System

Topic: Dining Philosopher Problem

No. of Students Participated: 50

Brief Write-up:

As part of an interactive learning activity on the Dining Philosopher Problem, we selected 5 students to role-play as philosophers seated around a round table. Each philosopher was provided with a bowl and two spoons placed between them, symbolizing shared resources. The students simulated the two primary states in the problem: thinking and eating. The key objective of the role play was to ensure that no two adjacent philosophers entered the eating state simultaneously, thereby avoiding deadlock and starvation scenarios.

The activity aimed to help students understand synchronization issues and resource allocation strategies in operating systems. During the session, selected students guided the philosophers on how to pick up spoons — either starting from the left or the right — depending on the scenario assigned. Various scheduling and timing strategies were tested to observe how they impacted fairness, efficiency, and the possibility of starvation.

By experimenting with different synchronization techniques, students identified both the benefits and drawbacks of each approach. They understood how improper resource handling could lead to system bottlenecks, and how algorithms like resource hierarchy or semaphore-based solutions help mitigate such risks. This hands-on activity reinforced theoretical concepts and fostered collaborative problem-solving among students.

Name of the Activity: Collaborative Learning

Faculty Name: Ms. KBKS Durga

Class: IV/ II ECE

Academic Year: 2023-2024

Subject Name: Data Structure

Topic: Linked list, minimal spanning tree

No. of Students Participated: 49

Brief Write-up:

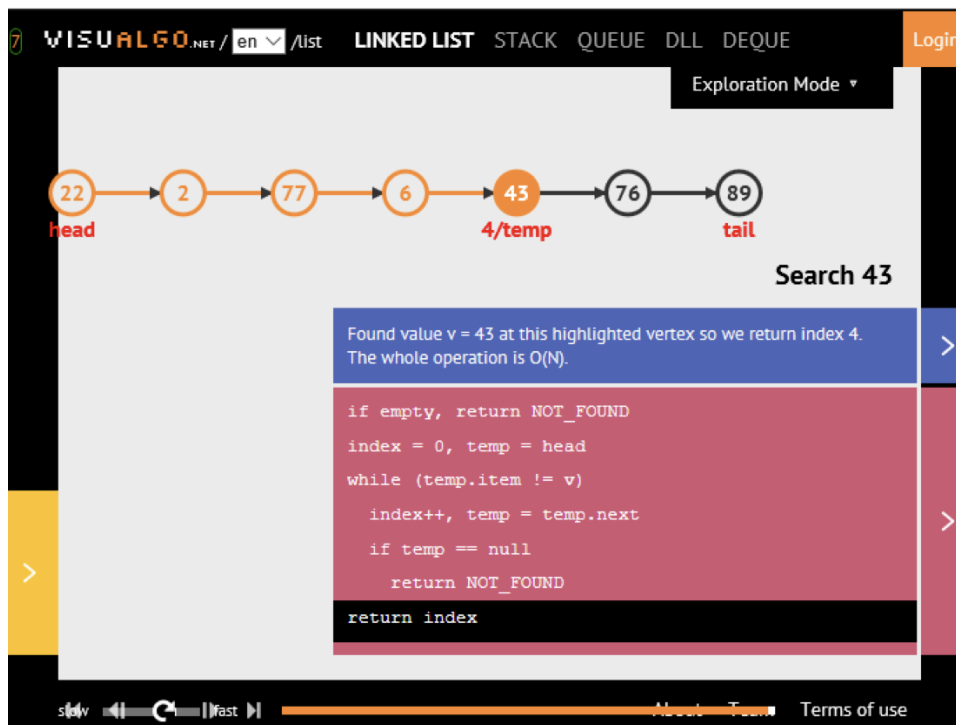

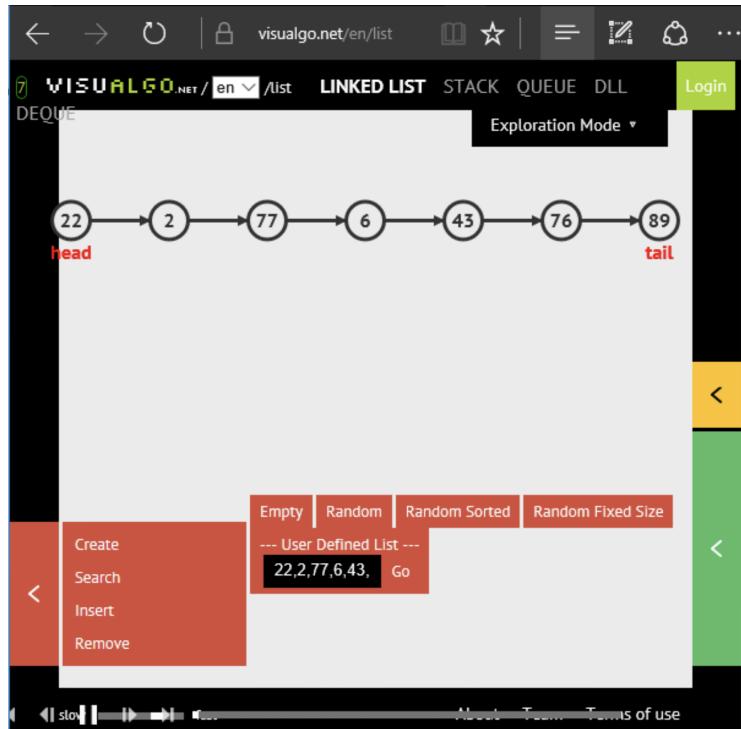

As part of a collaborative learning activity on the topic of linked list, minimal spanning tree, all the students actively participated by logging into the visualgo.net platform. Within this virtual environment, students selected the linked list experiment, watched the instructional video, and initiated the interactive simulation.

The virtual lab offered an animated and visual representation of how a linked list functions. Through the simulation, students observed how nodes are created, linked, inserted, and deleted in real-time. This hands-on experience helped them understand the fundamental structure and behavior of linked lists, which can otherwise be difficult to grasp through theory alone.

The use of animation and simulation made the learning process more engaging and effective. Students could visualize the data flow and pointer manipulation involved in each operation. This dynamic learning method not only improved their conceptual clarity but also allowed them to relate it to practical programming scenarios.

By the end of the session, students had developed a solid understanding of linked lists and gained confidence in applying the concept in coding. The activity successfully bridged the gap between theoretical knowledge and practical application.

Activity Name: Diagram & Deliver-Software Engineering in Action

Faculty Name: Ms. Padmavati E Gundgurti

Class: II / II CSE

Academic Year: 2023-2024

Subject Name: Software Engineering

Topic: Different Types of Software Architecture

No. of Participants: 60

Brief Write – Up:

This engaging and collaborative classroom activity is designed to deepen students' understanding of Software Engineering by focusing on the Software Development Life Cycle (SDLC) and various software architectures. Students will work in pairs to choose an SDLC model—such as Waterfall, Agile, Spiral, or V-Model—and visually present its stages along with its corresponding software architecture (e.g., Monolithic, Microservices, Layered) using a whiteboard.

The objective is to analyze the key phases of SDLC—Planning, Requirement Analysis, Design, Implementation, Testing, and Deployment & Maintenance—and demonstrate how architectural decisions impact the development process. The activity emphasizes visual representation through structured diagrams and annotated workflows to reinforce theoretical knowledge with practical insights.

Each team's presentation will be evaluated based on five key criteria:

1. **Understanding of SDLC & Architecture** – Depth and accuracy of conceptual understanding.
2. **Clarity & Board Presentation** – Organization, structure, and effectiveness of visual explanation.

3. **Team Collaboration** – Coordination, balanced contribution, and mutual support.
4. **Engagement & Interaction** – Ability to capture audience interest and handle questions confidently.
5. **Time Management** – Efficient pacing, staying within the time limit, and smooth transitions.

The activity promotes peer learning, teamwork, analytical thinking, and effective communication. By using real-world examples and clear architectural visuals, students gain a practical grasp of how different SDLC models guide software development. Additionally, the whiteboard format encourages spontaneity, creativity, and a strong understanding of system design and process workflows. This activity not only reinforces software engineering concepts but also builds soft skills essential for professional success.

Activity Name: Think-Pair-Share

Faculty Name: Ms. Padmavati E Gundgurti

Class: III / II CSE

Academic Year: 2023-2024

Subject Name: FIOT

Topic: Introduction to Fundamentals of IoT

No. of Participants: 68

Brief Write-up:

This classroom activity is designed to introduce students to the **Fundamentals of the Internet of Things (IoT)** through an interactive and collaborative learning approach. The **Think-Pair-Share** method encourages critical thinking, teamwork, and effective communication, making it ideal for exploring foundational IoT concepts.

Students are divided into pairs using a **dice-based selection method**, ensuring random and fair grouping. Each team will be given **5 minutes to present** on a specific IoT fundamental such as Sensors & Actuators, Connectivity, Edge Computing, Cloud & Data Storage, or Security & Privacy. Presentations are followed by a **2-minute Q&A session**, allowing peers to engage and clarify doubts.

Teams will use **ICT tools** like mobile phones for real-time research, note preparation, and accessing reference materials. This enhances their digital literacy and supports dynamic presentations.

The objective was to Understand core components and functioning of IoT, develop collaboration and public speaking skills and apply ICT tools effectively in academic settings.

By the end of the session, students will not only grasp the importance of IoT but also gain hands-on experience in working collaboratively and presenting technical content effectively. This activity promotes both technical understanding and essential soft skills needed in the modern digital world.

Activity Name: Quiz

Faculty Name: Ms. Padmavati E Gundgurti

Class: III / I CSE

Academic Year: 2023-2024

Subject Name: Information Retrieval System (IRS)

Topic: Indexing & Storage, Query Processing, Ranking Algorithms, Relevance Feedback, Natural Language Processing (NLP)

No. of Participants: 68

Brief Write-up:

To introduce the concept of **Information Retrieval Systems (IRS)** in an engaging and practical way, a hands-on classroom activity was conducted involving various **student-friendly quiz platforms**. An IRS is a software system designed to help users locate relevant data from vast collections of information efficiently. It is the core technology behind tools like search engines, digital libraries, and recommendation systems.

The session began with a brief overview of the **fundamentals of IRS**, including:

- **Indexing & Storage** – Structuring data to enable quick searches.
- **Query Processing** – Interpreting user queries to deliver relevant results.
- **Ranking Algorithms** – Ordering results based on importance and relevance (e.g., PageRank).
- **Relevance Feedback** – Using user interactions to refine results.
- **Natural Language Processing (NLP)** – Enhancing search capabilities through AI.

Students were divided into **teams of 3–4 members** from a total class strength of **68**, and each team participated in quiz-based learning using different **ICT platforms**. These included:

1. **Kahoot!** – Game-based live quizzes that sparked excitement.
2. **Quizizz** – Self-paced quizzes with fun memes.
3. **Mentimeter** – Used for polls and live word clouds.
4. **Google Forms** – Enabled easy question creation and instant feedback.
5. **Socrative** – Real-time assessment through quick polls.
6. **Plickers** – Paper-based interactive responses using QR-like cards.
7. **Quizlet** – Flashcard learning integrated with games.
8. **Gymkit** – Gamified learning with virtual currency rewards.
9. **Slido** – Interactive Q&A and real-time quizzes.
10. **ClassMarker** – Professional quiz platform with certificates.

The activity was vibrant and **highly interactive**, encouraging participation from all students. By merging **technical content** with **game-based learning**, students not only grasped key IRS concepts but also enjoyed a collaborative and competitive classroom experience.

Department of Computer Science & Engineering

Name of the Activity: Hangman Game

Faculty Name: Dr. M. Indrasena Reddy

Class: I / I CSE

Academic Year: 2023-2024

Subject Name: PPS

Topic: Strings

No of Participants: 60

Brief WriteUp:

The Hangman Game is a classic and engaging computer-based word-guessing game that offers an excellent opportunity for students to apply their understanding of strings in the C programming language. The game logic is simple yet effective in reinforcing the use of string manipulation, loops, conditional statements (if-else), and basic input/output operations.

Game Rules:

- A hidden word is presented to the player with some or all characters omitted (represented by underscores).
- The player must guess the correct characters to complete the word.
- Only 3 incorrect guesses are allowed. If the player guesses the word within the limit, the man survives; otherwise, the man gets hanged.

This activity allows students to:

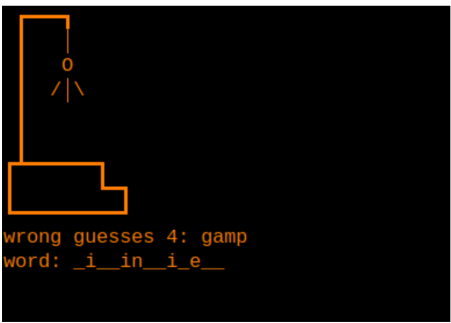

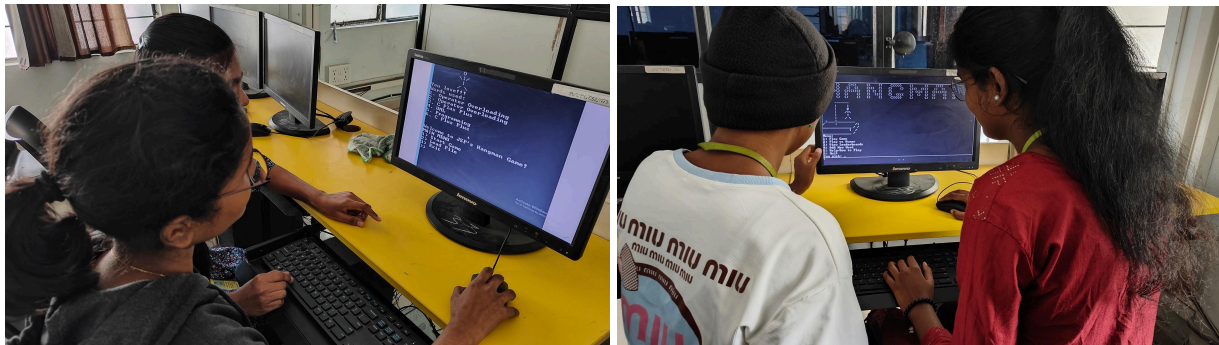

- Work with character arrays (strings) in C.
- Understand how to compare and replace characters using loops and conditions.
- Apply logical thinking and control flow to track chances and game status.

Learning Objectives:

- To strengthen students' conceptual understanding of strings in C.
- To improve their ability to build logic using control structures.
- To encourage interactive programming through a fun and goal-oriented task.

The Hangman game is easy to implement, encourages creativity, and builds problem-solving skills, making it an ideal practical activity for beginner programmers.

Name of the Activity: Quiz

Faculty Name: Ms. Suparna Das

Class: III / II - CSE

Academic Year: 2023-24

Subject Name: Scripting Language

Topic: Ruby language

No. of Participants: 46

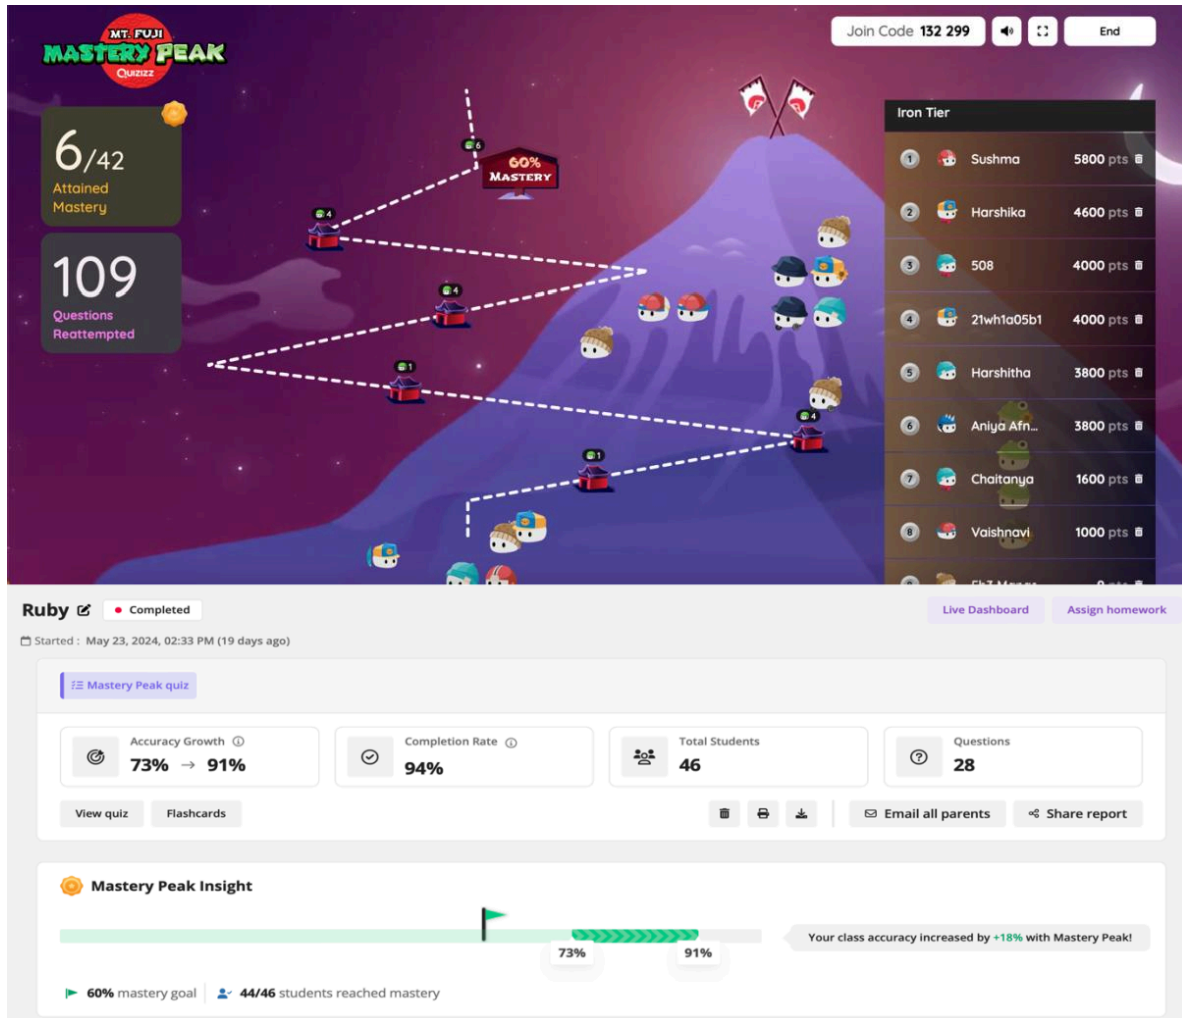

Brief Write – Up:

To assess the students' understanding and retention of the concepts covered in the Ruby scripting language, an online quiz activity was conducted using the Quizizz platform. The quiz aimed to evaluate how effectively students had learned both fundamental and advanced topics taught during the course. A total of 28 carefully selected multiple-choice questions were included, covering essential Ruby concepts such as variables, loops, arrays, hashes, control structures, methods, classes, and modules.

Students were given a specific time limit to complete the quiz, fostering a competitive and interactive environment. This real-time assessment approach encouraged active participation, enhancing student engagement and focus. The activity helped students recognize their strengths and areas needing improvement, while also providing valuable feedback to the instructor on the efficacy of the teaching methods used throughout the course.

The quiz acted as a reinforcement tool, prompting students to revisit key topics and sharpen their problem-solving skills in Ruby. All participants showed keen involvement, and their positive feedback highlighted the success of the activity in promoting active learning and concept clarity.

Name of the Activity: Group Activity

Faculty Name: Dr. Reya Sharma

Class: III/I CSE

Academic Year: 2023-2024

Subject Name: Information Retrieval System

Topic: Text Processing techniques

No. of Participants: 70

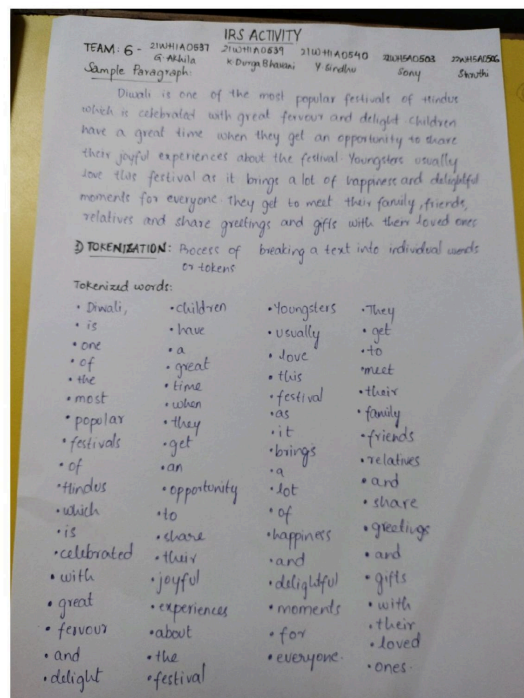

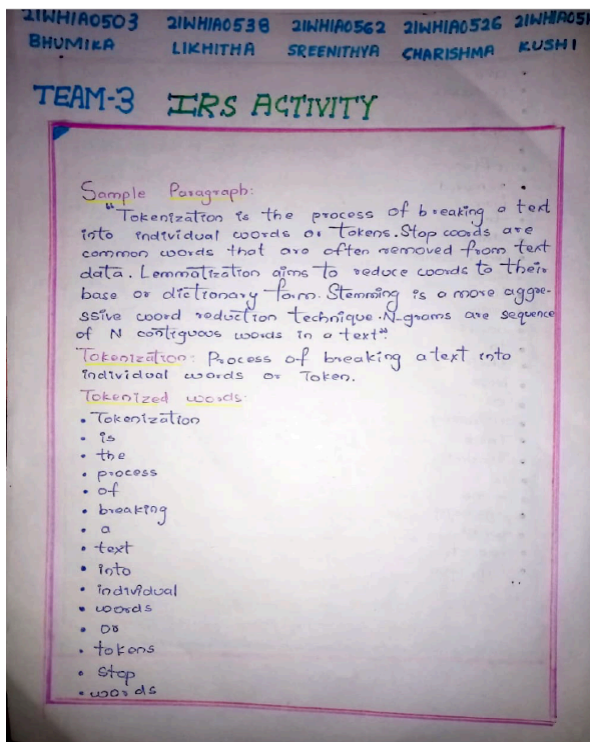

Brief Write – Up

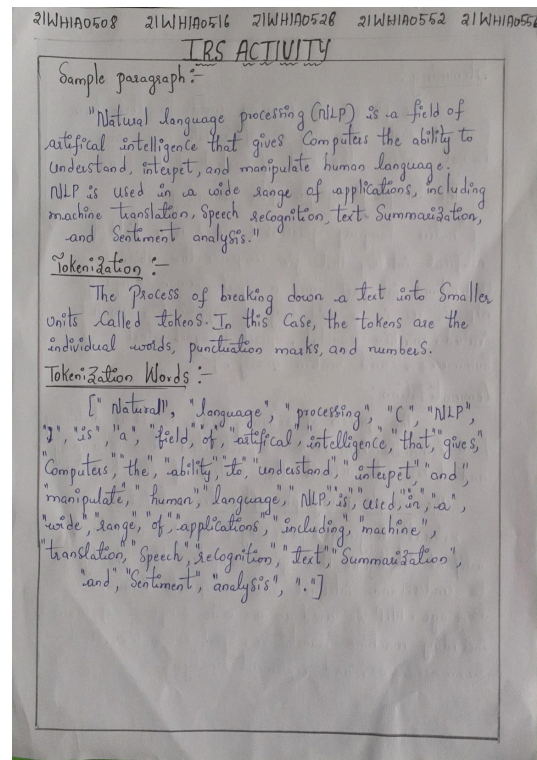

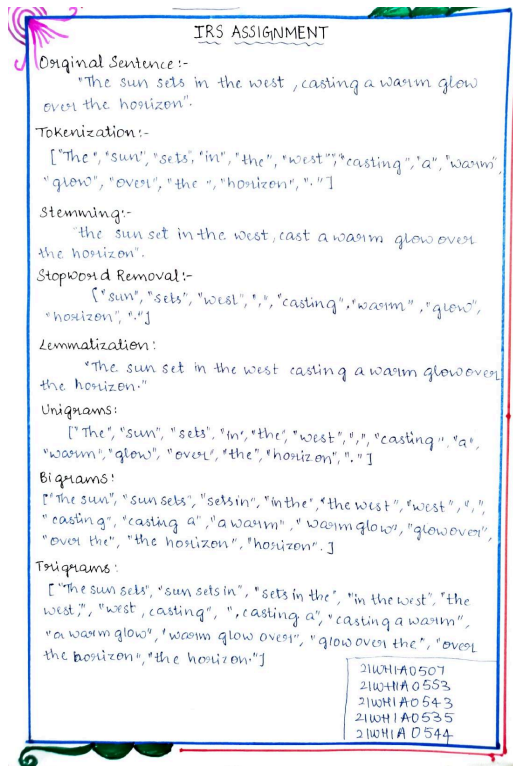

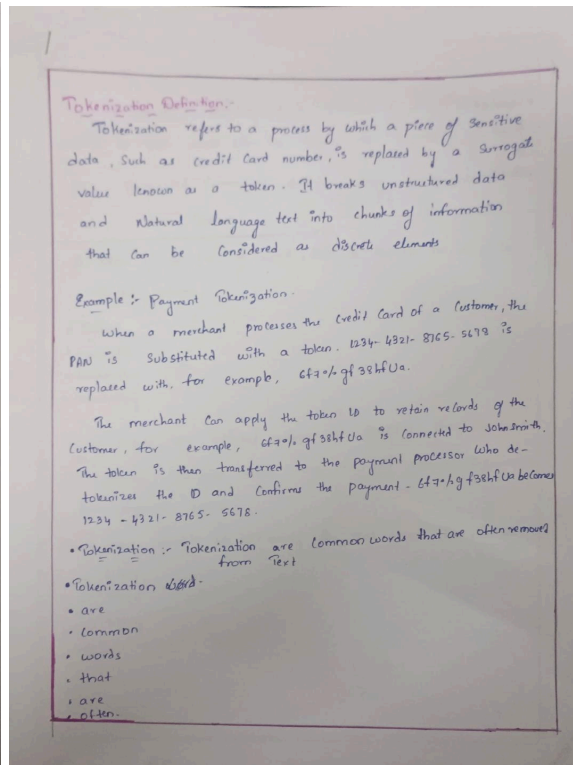

A group activity was conducted to help students understand the core concepts and techniques involved in text processing, a fundamental part of information retrieval systems. The students were divided into 14 teams, each comprising 5 members. The objective was to give students hands-on exposure to various text processing methods that are essential in transforming raw text into a structured and analyzable format.

During the activity, each team was assigned tasks that involved processing different types of text inputs such as sentences, paragraphs, or full documents. They applied key techniques such as tokenization, stop-word removal, stemming, lemmatization, and part-of-speech tagging. These tasks were aimed at demonstrating how textual data is cleaned and prepared for machine learning and natural language processing applications.

The activity encouraged active participation and collaboration among team members, allowing them to discuss and implement each step of text preprocessing. It provided practical insight into how well-processed text contributes to better performance in tasks like sentiment analysis, information retrieval, and NLP models. Overall, the session was engaging and informative, reinforcing theoretical concepts through practical implementation in a collaborative learning environment.

Tokenization:

It is the first step in processing text data. It involves breaking the text into individual words or tokens, making it easier to work with and search.

["the", "quick", "brown", "fox",
"jumps", "over", "the", "lazy",
"dog", "."]

Stemming:

Stemming is used to reduce words to their base or root form.

"the quick brown fox
jump over the lazy dog."

Ex: Children playing in the park, their laughter echoing through the air.

→ Tokenization:-

Tokens: ["children", "playing", "in", "the", "park", "their",
"laughter", "echoing", "through", "the", "air"]

→ Stemming:-

Stemmed Tokens: ["children", "play", "in", "the", "park", "their",
"laughter", "echo", "through", "the", "air"]

→ Stopword Removal:-

Without Stopwords: ["children", "playing", "park", "laughter",
"echoing", "air"]

→ Lemmatization:-

Lemmatized Tokens: ["child", "play", "park", "laughter", "echoing", "air"]

→ N-gram Analysis:-

* Unigrams: ["children", "playing", "park", "laughter", "echoing", "air"]

* Bigrams: ["children playing", "playing park", "park laughter",
"laughter echoing", "echoing air"]

* Trigrams: ["children playing park", "playing park laughter",
"park laughter echoing", "laughter echoing air"]

INFORMATION RETRIEVAL SYSTEMS activity - 1

Team 11:

21WH1A0506	V. Parvitha shivani
21WH1A0514	shaik sushma
21WH1A0519	Sai Sri Priya
21WH1A0521	A. Aashritha
21WH1A0530	G. Anjali

"She sells seashells by the seashore."

1. Tokenization:

Tokenization breaks a sentence into individual words or tokens. For the given sentence, tokenization would result in:
["she", "sells", "seashells", "by", "the", "seashore"].

2. Stemming:

Stemming reduces words to their root or base form. For instance, "sells" and "seashells" would be stemmed to "sell" and "seashell".

3. Stop Word Removal:

Stop words are common words like "the", "by", etc, that are often removed from text as they don't carry significant meaning. In this case, the sentence doesn't have many stop words, but "the" could be considered one.

BVRIT HYDERABAD College of Engineering for Women
(Approved by AICTE | Affiliated to JNTUH | Accredited by NAAC with Grade 'A' & NBA for CSE, ECE, EEE, & IT)

Bachupally, Hyderabad-090

Department of Computer Science & Engineering

Name of the Activity: Group Discussion

Faculty Name: Dr. M Shanmuga Sundari

Class: III / I CSE

Academic Year: 2023-2024

Subject Name: Data Analytics

Topic: Data Analytics tools

No of participants: 63

Brief Write – Up:

As part of an interactive classroom learning experience, a Group Discussion activity was organized to introduce Data Analytics Tools to students. Students were divided into teams of 5-7 size and different titles related to data analytics tools were assigned to each group to ensure comprehensive topic coverage and promote focused discussions.

The goal of the activity was to provide a practical and immersive understanding of how modern data analytics tools are applied in real-world scenarios. Topics covered by the teams included tools such as:

- Microsoft Excel – for basic data manipulation and visualization
- SQL – for querying and managing structured data
- R Programming – for statistical computing and graphics
- Python with libraries such as Pandas, NumPy, Matplotlib, and Scikit-learn – for data manipulation, analysis, and machine learning
- Tableau and Power BI – for interactive data visualization and dashboard creation

Each team discussed and presented:

- The key features and use cases of the assigned tool
- Advantages and limitations in various data analysis contexts
- Real-world applications in business, science, and technology
- Examples of how the tool can be used to perform statistical analysis, data cleaning, transformation, and predictive modeling

This activity successfully bridged the gap between theory and practice by allowing students to explore hands-on tools, preparing them for real-world data-driven roles in their future careers.
